DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a matrix switch made up of a plurality of crosspoint switches, classified in class 725, subclass 127.
- II. Claims 6-9 and 13, drawn to a method of simultaneous transmission of analog video and digital data signals on twisted cable, classified in class 725, subclass 136.
- III. Claims 10-12, drawn to a method for automatically equalizing a signal sent over twisted pair wiring, classified in class 725, subclass 124.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the methods of simultaneous transmission and automatically equalizing do not require the use of a matrix switch. The subcombination has separate utility in various other transmission schemes and is not required to accomplish the methods. Furthermore, the method

Art Unit: 2611

of simultaneously transmitting signals and automatically equalizing a signal over a wire pair are distinct and independent inventions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Groups I and III, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Frank Italiano on June 16, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
